

Amendments to the Claims:

1. (Currently Amended) A method for delivery of information to a destination in a communications network based on ~~a the~~ physical location of a transmitter, comprising:
determining the physical location of the a transmitter based on one or more signals transmitted by the transmitter to one or more communications networks;
identifying an electronic account in said one or more communications networks based on said one or more signals;
determining a communications network address that best matches said physical location;
and
forwarding information relating to said electronic account to said communications network address.
2. (Currently Amended) The method of claim 1, wherein the one or more signals transmitted by the transmitter are forwarded to a first communications network.
3. (Original) The method of claim 2, wherein the electronic account is identified in a second communications network.
4. (Original) The method of claim 3, wherein the information forwarded includes electronic mail messages associated with the electronic account.
5. (Currently Amended) A method for delivery of information to a destination in a communications network based on ~~a the~~ physical location of a mobile unit, comprising:
determining the physical location of the a mobile unit based on one or more signals transmitted by the mobile unit to a first communications network;
determining a network address of a networked device that is in proximity to the physical location of the mobile unit; and
submitting a request to a second communications network to forward information relating to an electronic account to ~~the~~a network address[[:]], the electronic account and the network address being determined based on said one or more signals.

6. (Original) The method of claim 5, further comprising:
in response to the request, forwarding information relating to the electronic account to the network address.
7. (Original) The method of claim 6, further comprising:
delivering the information forwarded to the network address to a point of delivery.
8. (Original) The method of claim 5, wherein the first communications network is a cellular network.
9. (Original) The method of claim 8, wherein the mobile unit is a cellular telephone.
10. (Original) The method of claim 5, wherein the second communications network is a computer network.
11. (Original) The method of claim 10, wherein the computer network includes a server for servicing the submitted request for the electronic account.
12. (Original) The method of claim 11, wherein the server is an electronic mail server.
13. (Original) The method of claim 10, wherein the network address is determined by finding the best match between the network addresses available at or near the physical location.
14. (Currently Amended) The method of claim 13, wherein the network address is ~~the~~ an IP address of a server at or near the physical location.
15. (Original) The method of claim 6, wherein the information forwarded includes electronic mail messages for the electronic account.
16. (Original) The method of claim 7, wherein the point of delivery is a printer server.

17. (Original) The method of claim 7, wherein the point of delivery is a device that can display the information.

18. (Currently Amended) A system for delivering electronic information to an address in a computer network[[,]] based on the physical location of a cellular transmitter, said system comprising:

logic code configured for execution by a processor, wherein execution of the logic code can cause the system to perform the following acts:

determine ~~the~~ a physical location of a cellular transmitter based on one or more signals transmitted by the cellular transmitter;

identify an electronic account based on said one or more signals;

locate a network address that best matches the physical location; and

submit a request to a server servicing the electronic account to forward electronic information stored on the server for the account to the network address.

19. (Currently Amended) The system of claim 18, wherein said server₁ in response to receiving the request₁ forwards ~~the~~ a requested information to the network address.

20. (Original) The system of claim 19, wherein said requested information includes electronic messages.
